## Geoweb Lake Edge Treatment

*Lake at  
Westport Plaza  
St. Louis, MO*

Installation is easy and fast. Concrete is placed in the bottom 5' of the Geoweb and soil with sod is placed in the top 3'. This provides 1' of concrete filled Geoweb above the water's surface.

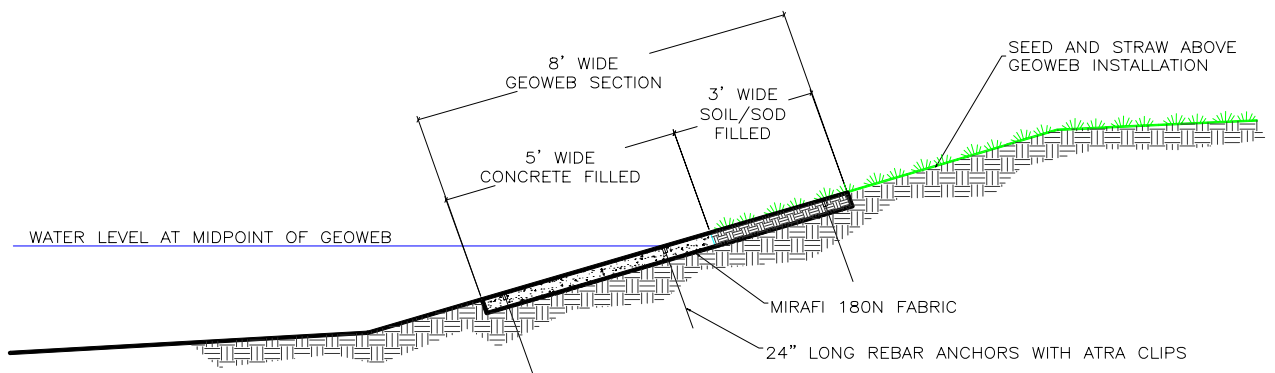

Geoweb is used at this lake in Westport Plaza to provide erosion protection around the edge of the lake. Many people, and geese, like to walk down to the water's edge. Before the Geoweb installation, 2 attempts had been unsuccessful at providing a stable edge treatment to the lake. The Geoweb is the long term erosion solution to this project.

# Geoweb Solution: Stabilize the Eroding Edge of the Lake

The concrete filled Geoweb provides a clean and continuous edge to the lake shoreline.
